

CloudSentrix Security Report

Source: sample_data/sample_aws_iam.json | Generated: 2026-08-08 19:29 UTC

Executive Summary

Overall Security Score: **0/100 (Critical)**

Findings: 14 Critical, 0 High, 0 Medium, 0 Low

This project's security posture is rated CRITICAL at 0/100. There are 14 critical findings that should be addressed immediately, as these represent direct paths for an attacker to gain broad control over the project. Overall, 14 critical, 0 high, 0 medium, and 0 low-severity issues were identified. See the findings section below for full details and recommended remediation steps.

Findings (14)

Severity	Finding	Principal	MITRE	Details
CRITICAL	Administrator Access — Full AWS Control (AWS-001)	arn:aws:iam::123456789012:user/admin-alice	T1078.004	'admin-alice' has the AWS AdministratorAccess managed policy attached, granting unrestricted access to all AWS services and resources — equivalent to root-level access.
CRITICAL	Administrator Access — Full AWS Control (AWS-001)	arn:aws:iam::123456789012:group/admins	T1078.004	'admins' has the AWS AdministratorAccess managed policy attached, granting unrestricted access to all AWS services and resources — equivalent to root-level access.
CRITICAL	Administrator Access — Full AWS Control (AWS-001)	arn:aws:iam::123456789012:role/ec2-admin-role	T1078.004	'ec2-admin-role' has the AWS AdministratorAccess managed policy attached, granting unrestricted access to all AWS services and resources — equivalent to root-level access.
CRITICAL	Administrator Access — Full AWS Control (AWS-001)	arn:aws:iam::123456789012:role/cross-account-role	T1078.004	'cross-account-role' has the AWS AdministratorAccess managed policy attached, granting unrestricted access to all AWS services and resources — equivalent to root-level access.
CRITICAL	IAM PassRole — Privilege Escalation via Service (AWS-002)	arn:aws:iam::123456789012:user/developer-bob	T1098.003	'developer-bob' holds iam:PassRole AND can launch AWS services (ec2:runinstances). It can attach a high-privilege role to a new EC2 instance or Lambda function and run code as that role — escalating beyond its own permissions.
CRITICAL	IAM PassRole — Privilege Escalation via Service (AWS-002)	arn:aws:iam::123456789012:group/devops	T1098.003	'devops' holds iam:PassRole AND can launch AWS services (ec2:*). It can attach a high-privilege role to a new EC2 instance or Lambda function and run code as that role — escalating beyond its own permissions.

Severity	Finding	Principal	MITRE	Details
CRITICAL	IAM PassRole — Privilege Escalation via Service (AWS-002)	arn:aws:iam::123456789012:role/ci-cd-deploy-role	T1098.003	'ci-cd-deploy-role' holds iam:PassRole AND can launch AWS services (lambda:*). It can attach a high-privilege role to a new EC2 instance or Lambda function and run code as that role — escalating beyond its own permissions.
CRITICAL	IAM Policy Manipulation — Self-Escalation Path (AWS-003)	arn:aws:iam::123456789012:group/devops	T1098.003	'devops' can both create/modify IAM policies (iam:putrolepolicy) AND attach them (iam:attachrolepolicy). It can create a policy granting AdministratorAccess and attach it to itself or any other principal.
CRITICAL	IAM Policy Manipulation — Self-Escalation Path (AWS-003)	arn:aws:iam::123456789012:role/ci-cd-deploy-role	T1098.003	'ci-cd-deploy-role' can both create/modify IAM policies (iam:putrolepolicy) AND attach them (iam:attachuserpolicy, iam:attachrolepolicy). It can create a policy granting AdministratorAccess and attach it to itself or any other principal.
CRITICAL	Publicly Assumable Role — Trust Policy Allows Anyone (AWS-004)	arn:aws:iam::123456789012:role/cross-account-role	T1078.004	Role 'cross-account-role' has a trust policy with Principal: '*', meaning ANY AWS identity — or anonymous caller — can call sts:AssumeRole on it without restriction. This role also has AdministratorAccess — a complete account takeover is possible.
CRITICAL	Access Key Creation — Long-Lived Credential Backdoor (AWS-005)	arn:aws:iam::123456789012:user/devops-diana	T1098.001	'arn:aws:iam::123456789012:user/devops-diana' holds iam:CreateAccessKey, allowing it to generate long-lived programmatic credentials (access key + secret) for any IAM user — including admin users. These keys persist until manually revoked and bypass MFA requirements.
CRITICAL	Access Key Creation — Long-Lived Credential Backdoor (AWS-005)	arn:aws:iam::123456789012:role/ci-cd-deploy-role	T1098.001	'arn:aws:iam::123456789012:role/ci-cd-deploy-role' holds iam:CreateAccessKey, allowing it to generate long-lived programmatic credentials (access key + secret) for any IAM user — including admin users. These keys persist until manually revoked and bypass MFA requirements.
CRITICAL	Backdoor IAM User Creation (AWS-006)	arn:aws:iam::123456789012:role/ci-cd-deploy-role	T1136.003	'ci-cd-deploy-role' can create new IAM users (iam:CreateUser) AND attach policies to them (iam:attachuserpolicy). It can create a hidden backdoor account with AdministratorAccess that persists independently of this principal's own access.
CRITICAL	IAMFullAccess — Complete IAM Control (AWS-007)	arn:aws:iam::123456789012:user/devops-diana	T1098.003	'devops-diana' has the IAMFullAccess managed policy, granting iam:* — full control over every IAM resource in the account including users, roles, groups, and policies. This principal can escalate any other principal's permissions.

Blast Radius (top 10)

No data.
